

MODERNWATER

MEDIA RELEASE
1st September 2009

MODERN WATER SPONSORS THE BRITISH SCIENCE FESTIVAL

Modern Water plc, an advanced water technologies company based in Guildford, has linked up with the British Science Association as a sponsor of the British Science Festival, hosted this year by the University of Surrey.

As one of the Festival sponsors, Modern Water will be exhibiting as part of the 'Science about Town' event in Trinity Centre, High Street, Guildford on Saturday 5th and Sunday 6th September. Visitors to the Modern Water stand will be able to see first hand how the company's water toxicity monitoring technology works, and there will be fun and educational experiments for children and adults alike.

Through its sponsorship of the event, Modern Water is particularly keen to spark enthusiasm and excitement in young people to consider science or engineering as a career. Modern Water has been based in Guildford since the company was founded and its ground-breaking desalination technology was developed by academics at the University of Surrey.

Alice More O'Ferrall, Marketing Manager, commented:

"As a company, we employ cutting edge techniques from science and engineering, and so the British Science Festival is an important event in the calendar. To have the event hosted on our doorstep represents a fantastic opportunity for Modern Water to engage with our community. Using technology developed at The University of Surrey, Modern Water is a real Guildford success story, and we're delighted to be able to showcase our business locally."

The British Science Festival is hosted by the University of Surrey in Guildford from 5th – 10th September 2009 with events taking place across Surrey. For a link to the festival's Web site, <http://www.britishscienceassociation.org/web/BritishScienceFestival/>.
